■ **India Infrastructure Report 2023 Spotlights Digital Technology's Transformative Role in Urban Development**

Former Vice President Shri Venkaiah Naidu has released the India Infrastructure Report 2023, jointly compiled by the National Institute of Urban Affairs (NIUA) and Infrastructure Development Corporation (Karnataka) Ltd. (iDeCK). One of the standout features of the report is its focus on the transformative potential of digital technology in shaping India's urban landscape, with an emphasis on 'smart cities' and performance ranking criteria. The financial dimensions of urban development, especially the role of public-private partnerships (PPPs) and municipal bonds, are thoroughly examined. Urban transportation planning and redevelopment strategies, including transit-oriented development, efficient urban goods movement, and floor space and land price regulation, are pivotal components of the report's discussion on effective urban governance in India. Comprising 25 well-researched papers by seasoned authors with extensive experience in the urban planning sector, the document offers valuable insights for planners, decision-makers, academicians and other stakeholders.
