

product's ability to decrease chemical fertilizer usage, improve crop yield, and preserve soil. Over 5.7 crore bottles have already been sold within India.

■ **Micron Invests \$825 Million in Gujarat Chip Facility, Creating Thousands of Jobs**

American chipmaker Micron will invest \$825 million to construct a Chip Assembly and Testing Facility in Gujarat, India. The total investment, including contributions from Government of India and Gujarat government, amounts to \$2.75 billion. Construction is set to begin this year, with the first phase becoming operational in late 2024. The facility will create up to 5,000 direct jobs and 15,000 community jobs. The Government of India will provide 50% fiscal support, and the Gujarat government will offer incentives representing 20% of the project cost. This move is expected to transform India's semiconductor landscape.
