

BRAINWARE UNIVERSITY

Brainware University 398, Ramkrishnapur Road, Barasal Kolkala, West Bengal-700125

Term End Examination 2024-2025 Programme – B.Sc.(PSY)-Hons-2023 Course Name – Biological Basis of Behaviour Course Code - BPY30107 (Semester III)

Full Marks: 60	Time: 2:30 Hours
[The figure in the margin indicates full marks. Candidates are required to a	give their answers in their
own words as far as practicable.]	

1 x 15=15

- Group-A (Multiple Choice Type Question) 1. Choose the correct alternative from the following: (i) Identify from the following a non-human subject used in biopsychology research. a) Whale b) Elephant c) Giraffe d) Rat (ii) Indicate why using human subjects is advantageous in biopsychology research. a) Human subjects can readily provide their b) Human subjects are free to use. subjective experiences. c) Human subjects do not require ethical d) Human subjects are more powerful than animal subjects. clearance. (iii) Identify the chief problem of case studies. b) It is costlier to conduct. a) It does not provide information about life history. d) The results are not generalizable. c) It takes a long time to conduct. (iv) Identify which one of the following is an X ray based technique. b) MRI a) PET scan d) TMS c) Cerebral Angiography (v) Select the method from the following that does not involve injecting dyes in the body. a) Cerebral Angiography b) PET scan d) fMRI c) Contrast CT scan (vi) Select the compound that is injected in the body for PET scan. b) Methyl oxalate a) Chlorofluorocarbon d) Fluorodeoxyglucose c) Mercury dioxide (vii) Identify the primary function of neurons. b) To conduct electrical impulses throughout

a) To transmit genetic information

the body

c) To store nutrients

d) To provide structural support to the nervous system

(vii	ii) Recall the part of the neuron that receives inco	ming signals from other neurons.	
(ix	a) Axonc) Dendrites) Recall the name of the fatty substance that instance transmission.	b) Soma d) Myelin Sheath Ilates axons and speeds up electrical	
(x)	a) Synapsec) NeurotransmitterIdentify the glial cell that is responsible for form nervous system.	b) Myelin d) Receptor ning the myelin sheath in the central	A À
(xi)	a) Schwann Cellsc) MicrogliaRecall the resting membrane potential of a typi	b) Astrocytes d) Oligodendrocytes cal neuron. b) -70mV d) -20mV wo neurons. b) Axon hillock d) Myelin Sheath	18 18 18 18 18 18 18 18 18 18 18 18 18 1
lvii	a) +70mV c) +40mV) Identify the point of communication between to	b) -70mV d) -20mV wo neurons.	8
	a) Synapsec) Node of Ranvier) Identify the role of nodes of Ranvier in neurona	a) Myelli Sheath	
•	a) They provide nutrients to neurons.	b) They allow faster transmission of act potentials by enabling saltatory condd) They serve as receptors for	
They store neurotransmitters. neurotransmitters. (xiv) Recall the ion that is primarily responsible for the release of neurotransmitters from the			
(xv)	presynaptic terminal. a) K+ c) K+ Recognize the type of neuron that transmits sign muscles.	b) Ca++ d) CI- nals from the central nervous system to	
	a) Sensory neuron c) Interneuron	b) Motor neuron d) Glial cells	
	Group		
	(Short Answer Ty	pe Questions)	3 x 5=15
2. Summarize the role of Thyroxine (T4) in the body. 3. Explain how excessive cortisol can affect mood and cognition. 4. Describe synaptic plasticity. 5. Define antercognide and returned by the state of the state		(3) (3) (3)	
6. In	efine anterograde and retrograde amnesia with su fer the role of hyperthyroidism on mood and cog OR	nition.	(3) (3)
Re	eport the impact of thyroid hormone imbalance o	n sleep patterns.	(3)
	Group (Long Answer Тур		5 x 6=30
9. D m	classify the different classes of hormones in the versions the role of different brain structures in the describe the process of memory consolidation for nechanisms involved.	formation of new memories. using on the brain regions and cellular	(5) (5) (5)
ir. ir	nfer the personality and behavioural alterations th	nat can happen secondary to frontal lob	oe (5)

11. Evaluate the concept of positive and negative symptoms in the context of from dysfunction.	ntal lobe (5)
12. Hypothesize how the anterior and posterior pituitary are controlled.	(5)
OR Compile the different types of signals that regulate hormone release.	(5)
