## **BRAINWARE UNIVERSITY**

**Term End Examination 2024-2025** Programme – B.Tech.(CSE)-DS-2021/B.Tech.(CSE)-DS-2022 Course Name - Compiler Design Course Code - PCC-CSD504 (Semester V)

Time: 2:30 Hours Full Marks: 60

[The figure in the margin indicates full marks. Candidates are required to give their answers in their own words as far as practicable.]

## Group-A

(Multiple Choice Type Question)

1 x 15=15

- 1. Choose the correct alternative from the following:
- (i) Identify the statement that suitably describe the Cross-compiler.
  - a) Which is written in a different language from the source language
  - c) Which is written in the same language as the source language
- (ii) Identify the Lexemes from the following.
  - a) Identifiers
  - c) Keywords

- b) That generates object code for the machine it's running on.
- d) That runs on one machine but produces object code for another machine
- d) All of the mentioned (iii) Choose the correct characteristic of LALR(1) grammars.
  - a) LALR(1) parsers have more states than LR(1)
  - parsers c) LALR(1) parsers combine states to reduce the
- number of states in LR(1) parsers
- b) LALR(1) parsers are less powerful than SLR(1) parsers
- d) LALR(1) parsers cannot handle shift-reduce conflicts
- (iv) Identify the string from the following that can be generated by the grammar S->aS/bA, A->d/ccA
  - a) aabccd

b) adabcca

b) Constants

c) abcca

- d) abababd
- (v) Determine the output form of intermediate code.
  - a) Postfix notation

b) Syntax Trees

c) Three Address code

- d) All of the mentioned
- (vi) Identify the input to code generator.
  - a) Source code

b) Intermediate code

|   | c) Target code   | d) All of the mentioned   |  |  |
|---|--|---|--|--|
| (vii)   | Determine the value of synthesized attribute for a   | parse tree node depends on.   |  |  |
|   | a) Attributes at the siblings only   | b) Attributes at parent node only   |  |  |
|   | c) Attributes at children nodes only   | d) None of the mentioned  |  |  |
| (viii)  | Identify the system program that loads an executive execution.   | able program in the main memory for   |  |  |
|   | a) Assembler   | b) Linker   |  |  |
|   | c) Loader  | d) Text editor  |  |  |
| (ix)  | Identify the process that identifies common sub-expression and replaces run-time computations by compile-time computation. |   |  |  |
|   | a) Local optimization  | b) Loop optimization  |  |  |
|   | c) Constant folding  | d) Data flow analysis   |  |  |
| (x)   | Select the correct statement that applies to a relocatable program form.   |   |  |  |
|   | a) The absolute memory address of the program  | b) The size of the program in memory  |  |  |
|   | c) The ability to execute at any memory location   | d) All of the mentioned   |  |  |
| (xi)  | Determine the best way to compare different imp  |   |  |  |
|   | a) Compare the time required to add a new entry  | <ul> <li>b) Compare the time required to delete a<br/>existing entry</li> </ul> | an   |  |
|   | c) Compare the time required to retrieve an entry  | d) All of the these   |  |  |
| (xii  | Identify the primary advantage of generating intermediate code in a compiler.  |   |  |  |
|   | a) It allows for faster compilation  | b) It simplifies syntax analysis  |  |  |
|   | <ul> <li>c) It enables machine-independent<br/>optimization</li> </ul>   | d) It directly generates executable code  |  |  |
| (xiii   | ) Select the phase of compilation where the source   | e code is converted into tokens.  |  |  |
|   | a) Semantic Analysis   | b) Lexical Analysis   |  |  |
|   | c) Code Optimization   | d) Parsing  |  |  |
| (xiv  | ) Identify the phase that removes unreachable coo  | le and redundant computations.  |  |  |
|   | a) Lexical Analysis  | b) Parsing  |  |  |
|   | c) Code Optimization   | d) Semantic Analysis  |  |  |
| (xv   | ) Identify the type of language recognized by a pus  | sh-down automaton   |  |  |
|   | a) Regular languages   | b) Context-free languages   |  |  |
|   | c) Context-sensitive languages   | d) Recursive languages  |  |  |
|   | Grou   | •   |  |  |
|   | (Short Answer T  | ype Questions)  | 3 x 5=15   |  |
| 2. E  | xplain Ambiguous grammar with an example.  |   | (3)  |  |
| 3. [  | Describe the representation of 3-address code with   | an example.   | (3)  |  |
| 4. Describe the phases of compilation in a typical compiler design. |  |   | (3)  |  |
| 5. V  | Vrite short notes to describe pass and phases of a   | compiler  | (3)  |  |
| 6. E  | xplain with an example 'Flow Graph'.   |   | (3)  |  |
|   | 0  | R   | Pr≪∎   |  |
| Ε   | xplain Dependency graph with an example  |   | (3)  |  |
|   |  |   | The state of the s |  |

## Group-C

(Long Answer Type Questions)

5 x 6=30

| 7.  | evaluate the first and follow functions for the given grammar- $S \rightarrow aBDh B \rightarrow cC C \rightarrow bC/ \in D$<br>$\rightarrow EFE \rightarrow g/EF \rightarrow f/E$ | (5) |  |  |  |
|-----|--|-----|--|--|--|
| 8.  | show the LL(1) parsing table for the following production rule: E> TE'   | (5) |  |  |  |
|     | E'> +TE'   ε   |     |  |  |  |
|     | T> FT'   |     |  |  |  |
|     | Τ'> *FT'   ε   |     |  |  |  |
|     | F> id   (E)  |     |  |  |  |
|     | *ε denotes epsilon   |     |  |  |  |
| 9.  | Justify with an example the term "ambiguity" in a grammar.   | (5) |  |  |  |
|     |  | 1 2 |  |  |  |
| 10. | Describe the various phases of a compiler in detail. Also write down the output for the  | (5) |  |  |  |
|     | following expression: position: =initial+ rate * 60  |     |  |  |  |
|     |  |     |  |  |  |
| 11. | Explain loop optimization with suitable example.   | (5) |  |  |  |
| 12. | Evaulate the first and follow functions for the given grammar- S $\to$ ACB / CbB / Ba A $\to$ da / BC B $\to$ g / $\in$ C $\to$ h / $\in$  |     |  |  |  |
|     | OR   |     |  |  |  |
|     | Estimate the first and follow functions for the given grammar- $S \rightarrow AA \rightarrow aB$ / Ad $B \rightarrow bC \rightarrow g$   | (5) |  |  |  |
|     |  |     |  |  |  |
|     | *********  |     |  |  |  |
|     |  |     |  |  |  |
|     |  |     |  |  |  |
